

MLBB Patch 2.1.67a Meta & Tier List Analysis

We consulted official patch notes and up-to-date stats to synthesize the current **Mobile Legends: Bang Bang** meta. Moonton's **2.1.67** patch (April 2026) rebalanced marksmen durability, buffs fighters (Dyrroth, Harith, Melissa) and revamped Aulus [12+L94-L100] [25+L1-L4] . The follow-up **2.1.67a** patch (May 14, 2026) gave targeted **buffs to roamers and fighters** (Belерick, Chou, Paquito, Aulus) and a **nerf to burst mage Harley** [19+L162-L170] [20+L331-L340] . The net effect is a meta that favors **sustained trades, crowd-control and durability** over raw burst. Below is our tier list and per-hero analysis.

Tier List (S+ through C)

We classify heroes into **S+ (meta-defining), S, A, B, and C** tiers. S+ heroes are contest-priority bans/picks; S-tier are core meta; A-tier are strong situational picks; B-tier are solid but less flexible; C-tier are niche or weak.

S+ Tier

Traits: Exceptional utility, teamfight control, or split-push capacity. Often heavily contested (high pick/ban).

- **Gloo (Tank)** – *Tier:* S+. *Roles:* Tank (Exp/Support), Secondary: Roam. Gloo is nearly unstoppable crowd-control with his attach-and-suck ultimate, essentially securing fights. He has ~55% win rate and ~70% ban rate [7+L452-L460] . *Strong:* Ultimate engages, extreme durability (shield), and game-changing CC [5+L117-L119] . *Limits:* Vulnerable to long-range poke and high mobility (can be kited), needs team follow-up. *Best when:* Enemy team has multiple squishies or CC-vulnerable comps. *Worst when:* Opponents can instantly burst or disengage him (e.g. Purify vs his ult). *Key strengths:* Unique latch-onto-hero ultimate; huge zone control. *Weaknesses:* Slow, mana-reliant early, predictable engage. *Draft value:* 10/10 (ban priority [3+L144-L150]). *Meta influence:* 10/10 (defines tank role).
- **Marcel (Support)** – *Tier:* S+. *Roles:* Support (Healer), Secondary: Roam. Marcel's abilities (esp. Imprison) clutch-save core carries; his 115% ban rate shows pro and solo queue fear [3+L144-L150] . *Strong:* Massive healing/shielding, global ult; counters burst mages. *Limits:* Squishy when isolated, needs team synergy. *Pick when:* Playing sustain composition or against heavy burst. *Avoid when:* Team already has ample sustain or if enemy has Purify and disables. *Strengths:* Global heal/ult, multi-CC. *Weaknesses:* Low damage, reliant on cooldowns. *Draft value:* 10/10 (most banned [3+L144-L150]). *Meta influence:* 10/10 (support backbone).
- **Floryn (Support/Mage)** – *Tier:* S+. *Roles:* Support, Secondary: Mid. Her global heal-and-cc (Lotus Flare) allows aggressive split-pushing and saves. *Strong:* Global heal (enhances 4v5 fights) and crowd-control; ideal in poke/split comps [5+L119-L120] . *Limits:* Very squishy if caught, requires map awareness. *Best:* If team needs global presence or sustain. *Worst:* In all-in heavy CC comps (easily burst). *Strengths:* Global map impact, chaining heals with ults. *Weaknesses:* No mobility, low base stats. *Value:* 9/10. *Influence:* 9/10 (enables non-traditional comps).

- **Diggie (Support/Roam)** – *Tier:* S+. *Roles:* Support/Roam. Diggie's Time Journey (ultimate) grants brief CC immunity to teammates – a counter to heavy CC meta. *Strong:* Game-changing anti-CC shield, consistent poke (Clairvoyance), good roaming. *Limits:* Relies on teammates using ult in time. *Pick when:* Facing stunlock comps or needing peel (e.g. vs Lynes or chained stuns). *Avoid when:* Enemy has few CCs and your team lacks squishies to save. *Strengths:* Clutch immunity aura, mobile. *Weaknesses:* Low damage, ult timing skill required. *Value:* 9/10. *Influence:* 9/10 (shifts teamfight dynamics).
- **Kaja (Support/Tank)** – *Tier:* S+. *Roles:* Support, Secondary: Tank. Kaja offers lockdown (Divine Judgment) that single-handedly deletes priority targets, plus initiation (Ring of Order). *Strong:* Reliable initiation + pick potential; high win rate in pro plays. *Limits:* Mana hungry early; can be kited if used poorly. *Pick when:* Need hard engage or answer to mobile assassins (Flicker+ult). *Worst:* If enemy comp has multiple escapes or Purify. *Strengths:* One-shot ults, decent mobility. *Weaknesses:* Mana issues, mediocre scaling outside ult. *Value:* 9/10. *Influence:* 8/10 (widely contested pick/ban).
- **Sora (Fighter)** – *Tier:* S+. *Roles:* Fighter (EXP), Secondary: Roam. Sora's chain-CC and ultimate (pin to wall) lock down multiple enemies. *Strong:* Multiple-hit CC chains, surprising burst for a fighter. *Limits:* Requires skill to link skills; moderate tankiness. *Pick when:* Facing melee-heavy teams or need wombo combos. *Worst:* If crowd-control or ranged poke threatens. *Strengths:* Stun combo, good scaling. *Weaknesses:* Little gap-close if skills miss. *Value:* 9/10. *Influence:* 8/10 (dominates fights with peel and CC).
- **Gord (Mage)** – *Tier:* S+. *Roles:* Mage (Mid), Secondary: Roam. Gord has one of the highest win rates (55.5%) **【7†L399-L407】** due to his extreme poke and zoning. *Strong:* High burst AoE poke, safe range, low cooldowns. *Limits:* Immobile, mana-hungry, needs charging to do damage. *Pick when:* Need wave-clear and teamfight poke. *Avoid:* Against dive assassins who can skip his poke (e.g. Fanny). *Strengths:* Game-winning ult snipe, sustained DPS. *Weaknesses:* No escape, slow early clears. *Value:* 9/10. *Influence:* 8/10 (meta mage pick).
- **Hanabi (Marksman)** – *Tier:* S+. *Roles:* Marksman (Gold Lane), Secondary: Roam/EXP. Hanabi's rebound passive and shield gives exceptional late-game damage and survivability. Leading pick rate among marksmen, she has ~3.2% pick **【7†L418-L426】** and 54.7% win rate **【7†L424-L430】**. *Strong:* Immunity (petal barrage shield), great AOE late-game. *Limits:* Weak early, vulnerable to burst. *Pick when:* Need a safe scaling DPS and against heavy illusion-based comp. *Worst:* If assassins can dive early or Blitz Tower. *Strengths:* Bounce damage, shield, good sustained DPS. *Weaknesses:* Mana-dependence, large hit-box. *Value:* 9/10. *Influence:* 9/10 (core Gold-laner).
- **Kimmy (Marksman/Mage)** – *Tier:* S+. *Roles:* Marksman (Gold), Secondary: Mid. Kimmy's hybrid damage and mobility allow constant pressure and dodge. *Strong:* Constant ranged damage while kiting; her charged skill increases team DPS. *Limits:* Low burst; positioning reliant. *Pick when:* Needing portable DPS that can cut waves and fight. *Worst:* Heavy CC comps. *Strengths:* Great burst and sustain; built-in dash. *Weaknesses:* Glass cannon. *Value:* 8/10. *Influence:* 8/10.

S Tier

Traits: Strong meta picks with specialized strengths.

- **Aulus (Fighter)** – *Tier: S. Roles:* Fighter (Jungle/EXP), Secondary: Roam. After his revamp and buff to stack speed 【19†L193-L202】 , Aulus can quickly reach full “Fighting Spirit” stacks for high attack speed. *Why S:* Fast tempo jungler with strong mid-game dueling. *Strong:* Early-game skirmishing with speed buff and gap-close. *Weakness:* Lost ult immunity, making him vulnerable to CC 【19†L206-L212】 . *Situations:* Great in solo queue flank comps; less safe in coordinated play. *Value:* 8/10. *Influence:* 7/10.
- **Belerrick (Tank)** – *Tier: S. Roles:* Tank (Roam/EXP). Recent buff gave +140 HP and faster taunt 【19†L216-L224】 . *Why S:* Extremely durable with a reliable root (Ancient Seed) to initiate. *Strong:* Zone control and soak damage. *Weak:* Mobility is poor; skill-shot reliant. *Pick when:* Enemy has many agile heroes who need locking down. *Value:* 8/10. *Influence:* 7/10.
- **Hilda (Fighter/Tank)** – *Tier: S. Roles:* Fighter (EXP), Secondary: Roam. High win-rate (52.7%) 【7†L457-L464】 due to powerful passive and bush farm. *Why S:* Dominant early laner; can solo turtle very early. *Strong:* Huge sustain in jungle/EXP lane and high damage if unpunished. *Weak:* Falls off late if team resets. *Situations:* Pick against squishy comps lacking early pressure. *Value:* 7/10. *Influence:* 7/10.
- **Lolita (Tank)** – *Tier: S. Roles:* Tank (Roam/EXP). A reliable off-tank with instant shield (Zap Energy) and knockback ult. *Why S:* Her shield can counter dive and skillshots, making her great vs burst. *Strong:* Anti-dive peel. *Weak:* Predictable when ult used; lacks CC variety. *Pick when:* Facing projectile heavy teams. *Value:* 7/10. *Influence:* 6/10.
- **Khufra (Tank)** – *Tier: A. Roles:* Tank (Roam/EXP). Solid crowd-control with Bouncing Ball (ulti) and skill-1 knockups. *Strong:* Excellent disrupter vs mobile heroes. *Weak:* Falls off if cant land spells (team needs to follow). *Pick when:* Enemy comp full of dashes (e.g. Fanny, Selenia). *Value:* 7/10. *Influence:* 7/10.
- **Minotaur (Tank)** – *Tier: A. Roles:* Tank (Roam/EXP). Resilient frontline with regeneration and teamfight control ult. *Strong:* Absorbs damage, punishes grouping with passive stun. *Weak:* Low mobility, skill cap on ult. *Situations:* Useful if enemy lacks burst to stop ult. *Value:* 6/10. *Influence:* 6/10.
- **Gusion (Assassin)** – *Tier: A. Roles:* Assassin (Jungle/Mid). High-mobility burst assassin. *Strong:* Can delete squishies in split-second; snowballs with kills. *Weak:* Hard to master; vulnerable when cooldowns down. *Pick when:* Need quick pick-offs and mid-game domination. *Value:* 8/10. *Influence:* 7/10.
- **Hayabusa (Assassin)** – *Tier: A. Roles:* Assassin (Jungle), Secondary: Mid. *Strong:* Excellent late-game split push; can avoid fights easily. *Weak:* Difficult early laning; reliant on enemy mistakes. *Pick when:* Facing low-vision comps; want late-game scaling. *Value:* 7/10. *Influence:* 6/10.

- **Yi Sun-shin (Marksman)** – *Tier: A. Roles: Marksman (Gold/EXP).* Versatile with multiple ult options for poke or engage. *Strong:* Global presence (ulti kite or storm); solid lane sustain. *Weak:* No true escape after using ult; reliant on landing skills. *Pick when:* Team needs flexible marksman or strong second late-game carry. *Value:* 7/10. *Influence:* 6/10.
- **Harley (Mage/Assassin)** – *Tier: A. Roles: Assassin/Mage (Jungle/Mid).* Former tier-1 threat, now slightly reduced by nerf (–14% Skill 1 damage) 【19†L264-L272】. *Why A:* Still strong roamer and pick potential, but mid-game less bursty. *Strong:* Mobile gap closer, high single-target damage. *Weak:* Early game vulnerable, mid-game damage slightly nerfed 【19†L272-L281】. *Pick when:* Need pick-off mage who can catch out-of-position enemies. *Value:* 6/10. *Influence:* 6/10.
- **Angela (Support/Roam)** – *Tier: A. Roles: Support, Secondary: Mid.* Can attach to allies for saves or engage, and speed boost. *Strong:* Unique shield and buff on carry. *Weak:* Very fragile if used as initiator; ultimate downtime. *Value:* 6/10. *Influence:* 6/10.
- **Kadita (Mage/Assassin)** – *Tier: B. Roles: Mage (Mid/EXP), Secondary: Jungle.* Good mobility and burst through water elementals. *Strong:* High damage AoE ult; good chasing. *Weak:* Skillshot reliant, falls off vs purify. *Value:* 5/10. *Influence:* 5/10.
- **Zetian (Mage)** – *Tier: B. Roles: Mage (Mid/Support).* Rises from a previous overhaul, strong zone control; top pick rate 【7†L401-L410】. *Strong:* Control in teamfights with gravity well ult; decent sustain. *Weak:* Requires skill to angle spells; mana-hungry. *Value:* 6/10. *Influence:* 5/10.
- **Masha (Fighter)** – *Tier: B. Roles: Fighter (Exp), Secondary: Roam.* “Hidden Gem” – very high win rate (55.91%) but rarely picked 【3†L144-L152】. *Strong:* Sky-high early to mid dueling with steroid; good tankiness. *Weak:* Hard learning curve; no magic damage. *Best when:* You can take unorthodox picks; great vs melee comps. *Value:* 5/10 (low pick); *Influence:* 5/10.
- **Kadita, Aamon, Zhuxin** – *Tier: B. Roles: Mage/Assassin.* Strong in specific drafts with heavy AoE or displacement. *Value:* 5/10 each.
- **Arlott, Uranus, Hilda, Yve, Granger, Karrie, Saber, Natalia** – *Tier: B/C.* Good in niche situations (Uranus is durable but overshadowed by tanks; Karrie still decent against tanks, etc.), but overshadowed by more consistent picks. *Value:* 3–6/10.

C Tier

Traits: Outclassed in current meta; either too situational or overtuned by others.

- **Badang, Paquito (Fighters)** – *Tier: C.* Both just got buffs 【20†L284-L293】 but still need work. Badang has good CC but is high-skill; Paquito's lane control improved, yet he is outranked by other bruisers.
- **Ling (Assassin)** – *Tier: C.* Meta-skewed (requires high skill and specific comps). Fun in solo but inconsistent.
- **Selena (Assassin/Mage)** – *Tier: C.* Old poke champ; viable in draft but outclassed by newer mages/assassins for win rate.

- **Fanny, Benedetta (Assassins)** – *Tier*: C. Highly mechanical, do well in hands of experts but rare.
- **Terizla (Fighter)** – *Tier*: C. Niche shield fighter; strong in duo but seldom first pick.
- **Estes, Rafaela, Nana (Support)** – *Tier*: D. Pure heal supports struggle to match utility of S+ supports [5†L167-L173] .
- **Esmeralda, Claude (Marksmen)** – *Tier*: D. Outclassed by hyper carries and by tanks. Esmeralda's anti-sustain niche not valuable; Claude lacks lane strength and falls off.

Meta-Level Analysis

Patch Design & Economy

- **Gold Lane Durability**: 2.1.67 devs **nerfed base HP of lane marksmen** with strong early laning, and **buffed high-mobility/long-range marksmen's growth** [12†L94-L100] . This encourages safer laning (e.g. Miya and Hanabi buffed) but penalizes early bullies (Beatrix's MS cut, Claude's HP buff but ult damage nerf [14†L170-L179] [14†L279-L288]). The goal is to reward scaling and position safety over early dominance.
- **Mana Costs & Mobility**: Marksmen had mana costs and movement speed adjusted [12†L94-L100] (e.g. Bruno, Clint buffs to MS [14†L312-L320]) so they can roam and farm more. Overall gold economy is similar, but laning phases are safer and more about outlasting rather than all-in trading.
- **XP Economy**: Fighters and EXP-laners got buffs (Paquito, Chou, Dyrroth, Harith) to prioritize lane pressure and experience collection. The "experience optimization" for Dyrroth (automatic rage regen) and Harith's improved lane-to-jungle flexibility [25†L1-L4] mean XP heroes reach power spikes faster, raising EXP lane importance.
- **Jungle Priority**: The jungle meta remains rock-paper-scissors [22†L301-L304] . High-mobility junglers (Aulus, Harith, Ling/Benedetta) can invade early, but durable farmers (Hilda, Masha) and turtle/dragon soloists (Hilda, Uranus) are still viable. Buffed fighters (Chou, Paquito) add more jungle options. However, fighters now often choose EXP lane over jungle to leverage buffs.
- **Turtle/Lord Control**: Burst mages (like Harley) are slightly nerfed, so securing early objectives (Turtle) relies more on fighters/marksmen diving. Heroes like Hilda or Lolita can solo-turtle early, while Hanabi and Miya take longer but guarantee late-game lord damage. As a result, objective fights are more brute-force (tank/wins) than burst contests.
- **Vision/Map Control**: MLBB lacks wards, so vision is by roaming. Roamers (Belерick, Diggie, Floryn, Faramis) are crucial for controlling turtles and rotations. This patch buffs survivable roamers, indirectly emphasizing map awareness.
- **Mobility & Crowd Control Trends**: The patch buffs **mobility** (Chou's range, reduced deceleration [19†L238-L247] ; Paquito shorter dash decay [20†L286-L294]) and **sustained CC** (Belерick taunt faster, Chou more consistent lockdown). Conversely, **burst** is slightly dialed back (Harley's nerf [19†L264-L272]). The net trend: teamfights favor **extended skirmishes** with kites and peel, rather than one-shot combos.
- **Burst vs Sustained**: Harley's nerf illustrates the shift: "14.3% reduction" on his three-card burst [19†L264-L272] means fewer instant kills. Adit Nugroho notes the patch "strengthens short-trade heroes and weakens burst snowball reliability" [20†L331-L340] . Thus, heroes that repeatedly swap and disengage (Chou, Aulus, Paquito) shine more than glass-cannon mages.
- **Late-Game Scaling**: With marksmen durability tuned for late carry roles, scaling matters more. Hanabi/Miya are rewarded. Supports like Estes/Floryn sustain teams into late game. Fighters such as Gloo and Aulus, who scale with tankiness or reset mechanics, remain relevant deep.

Team Composition & Strategy

- **Most Valuable Trait:** *Utility and crowd-control.* The current meta prizes heroes who can start or negate fights: tanks and roamers that enable teammates (Gloo's pull, Diggie's immunity, Floryn's global heal) and marksmen that create space (Hanabi shield, Kimmy dash). Raw damage without utility is secondary.
- **Most Important Resource:** *Teamfight tempo and objective control.* Drafts now often revolve around controlling neutral objectives via extended skirmishes. Heroes that can force or deny fights (Floryn healing turtle pushes, Chou pick-offs) shape how gold and exp are distributed. Gold is plentiful, but controlling turtle and lord is key to accumulation.
- **Strongest Team Archetype:** *Balanced front-line with global support and safe carry.* A common successful comp: two reliable tanks/roam (e.g. Gloo+Marcel/Diggie), one burst or catch assassin (Harley/Sora), one global support (Floryn/Estes) and a hyper-carry marksman (Hanabi/Kimmy). This covers all angles. Floryn + split-push carry (e.g. Beatrix or Zhuxin) is another variant. In essence, comps that combine *engage/disengage tools* + *sustained carry* dominate.
- **Most Influential Role:** *Roam/Support.* As one analysis notes, "Roam is one of the two most impactful roles" [7†L468-L476] . A good roam determines vision and fights. Meta roamers (Belerick, Diggie, Floryn) can single-handedly swing objectives. If a roam gets ahead, the enemy has nowhere safe (Harley and Chou in jungle were nerfed/buffed partly because roam control matters more than isolated burst).
- **Most Powerful Strategy:** *Coordinated skirmishing and protecting carries.* With burst downplayed, teams that can fight around their marksman and use CC to kite win most. Fights often turn into chain-CC mêlées rather than quick bursts. "Short-trade heroes" (like Paquito, Chou) capitalizing on small windows are rewarded [20†L331-L340] . The best strategy is to draft multiple forms of crowd-control and play to objectives, rather than rely on a single snowball hero.

Why S+ Heroes Excel

Heroes in the S+ tier exemplify meta needs: **unmatched utility or damage, plus versatility.** For example, Gloo's unique lasso-ult is unlike any other CC [5†L117-L119] , forcing opponents to ban or pick him. Floryn's global heal breaks games by enabling fights across the map [5†L119-L120] . Diggie nullifies entire CC-comps. Hanabi and Kimmy bring reliable late-game DPS with self-peel. In short, S+ picks are either **team enablers (tanks/supports)** or **immovable scaling carries (marksmen)**. They shape drafts because both teams want them or need to counter them. As one tier discussion notes, "the safest investments are S-tier tanks and top meta heroes that fit most drafts" [5†L177-L180] .

Permanently Strong Heroes

Some heroes remain strong across patches because their core kits solve fundamental problems. For instance, Gord's poke and Diggie's immunity have always been useful, so they rarely drop off. Their value comes from **role rather than numbers** – you always need a poke mage or a disabler in teamfight meta. Also, heroes with multiple strengths (e.g. high damage *and* CC) like Gloo or Kaja, endure buffs/nerfs because no simple tweak undermines their versatility. These heroes are "meta-agnostic" – they fit in many compositions.

Heroes Who Fade from Meta

Conversely, heroes disappear when they lack a role or get outclassed. Pure assassins like Fanny or Karina can't define meta if fights go long (crowd-control heavy). Healers like Rafaela/Estes fall because other supports out-scale them in utility. Often, a hero is *meta-locked out* if it's too specialized or if one of its strengths is countered by a prevalent trend (e.g. a hero needing grouped enemies suffers in dive metas). For example, burst mage Harley fell a notch because games now emphasize buildup; assassins like Saber drop when enemies draft immunity or out-scale them.

Pro vs. Solo/High-ELO Picks

Pro players focus on **reliability and coordination**. They pick heroes with fewer randomness and more team impact (e.g. preferring Estes heals or Floryn's ult in high-level drafts, versus solo queue players who might try flashy Fanny or Selena kills). Pros ban/pick heroes based on drafts – Marcel is nearly always banned, whereas a casual solo player might ignore him. Conversely, some heroes flourish in solo queue (like Chou or Aulus) because fights are less structured, allowing them to capitalize on mistakes. In summary: pros prioritize heroes that guarantee strategic advantage in a disciplined game (S/S+ picks), while solo/low-ELO might gamble on high skill picks or personal carry potential.

Meta Summary

This patch's meta centers on **durable, utility-heavy lineups** that can fight through skirmishes rather than burst them down. Marksmen were balanced for safer scaling (e.g. buffs to Hanabi/Miya durability) 【7†L418-L426】 , and **mobility-fighters were empowered** (Paquito, Chou, Aulus buffs 【19†L193-L202】 【20†L284-L293】) so that lanes pressure XP and kite fights. Tanks and roamers remain king – Gloo's control and Marcel/Diggie's saves dominate drafts 【5†L117-L120】 . Burst mages (Harley) were slightly clipped 【19†L264-L272】 , so teams lean on sustained damage. In essence, **coordination and crowd control win**: teams that lock down opponents and protect their carries consistently win games, making the meta an ecosystem of peel and picks more than assassination.

Meta Law

"Sustain and control beat burst and solo kills – consistent teamfight presence decides games."

Meta Philosophy

At its core, the current MLBB meta values **synergy over singular strength**. Heroes win not by raw power alone but by how well they bolster allies and objectives. The hidden principle: **choose heroes that solve fundamental game challenges (map-wide pressure, survivability, objective control), and play to team objectives, not just kills**. Adaptability and complementarity are worth more than flashy plays.

Future Predictions

Given trends, **fighters and roamers with sustained damage or teamwide utility** will continue to dominate. Expect buffs to high-mobility bruisers (to enable short-trade skirmishes) and to front-line supports. Heroes who can snowball safely early (while still scaling) will likely rise. We might also see **more**

global/roam tools or tweaks making visionless ganks riskier (promoting champions like Floryn or even new roamers). Assassins who offer more than burst (e.g. added CC or escape options) could re-emerge, as one-note burst is less favored. Overall: *durability + versatility* > *raw damage* heroes will lead future patches.

Story of the Meta

The Land of Dawn's meta is an ecosystem akin to **natural selection**. Each patch is a changing environment; only the fittest (heroes whose abilities meet core survival needs) thrive. Heroes like Gloo or Floryn are apex predators – they evolve to control prey (the enemy team). Others, like fleeting prey (burst mages), must adapt or fade as hunters adapt. This is warfare economy: teams with balanced “resource” (crowd-control, survivability, sustain) gather more “nutrients” (gold/XP from objectives) than those chasing singular kills. The **survival of the fittest** principle holds – champions that neither offer unique advantages (tagged “strongest hero”) nor fill critical roles (carriers, tanks, roamers) simply disappear from drafts. Thus, every season rewrites the battlefield map.

In this Darwinian meta, the **strongest hero (raw power)** isn't always the **most valuable** – a glass-cannon can kill one opponent but then dies alone, losing the war. Team-synergy traits (utility, CC, sustain) are the currency of victory.

Ultimately, the most important lesson for any MLBB player is: *Focus on fundamentals and teamwork, not on chasing the current OP pick.* Control objectives, communicate, and choose heroes that complement your team's strategy. Mastering waves, timing, and synergy wins games far more reliably than any single hero or patch.
